Winterizing Your Boat

Winterizing is more than just freeze protecting your boat. It is also preparing your boat for an extended period of non-use. Texas winters are unpredictable. You can have a balmy 70° afternoon followed by a hard freeze within a day or two. One hard freeze can cost you over $7500 per engine. Even though last winter was pretty mild, there was still one afternoon when we were trying to drain boats that had covers full of ice and engine lids that were literally frozen shut. There was less than 24 hours warning before that freeze. In previous seasons we had numerous boats that were damaged due to freezing temperatures that could have been prevented. Even if it doesn't freeze, winterizing your boat can prevent many problems in the spring such as a flooding carburetor, a stuck fuel injector, a dead battery or gallons of fuel going bad. These are just samples of problems you can encounter in the springtime if your boat wasn't prepared for storage. Most of these problems cost much more to fix than simply winterizing the boat. Don't worry about these things, let our team protect you boat for you and give you peace of mind. Planning to use your boat throughout the winter? No problem, an alternative to "winterizing" is our "Monthly Winter Maintenance Program". You will still be able to use your boat and have it protected too. This is even more beneficial if you live out of town or won't see your boat for long stretches of time. Some customers have us do a "year round" version of maintenance just for this reason.

Standard Engine Winterization

Drain block, manifolds, pumps, and hoses. Treat fuel system and fog engine. Disconnect battery when applicable. Placement of mold prevention packs and tag steering wheel.
Boat will need to be de-winterized in the spring. (Separate charge)
LABOR prices are as follows:

- **Single engine $188.00** **Twin engine $375.00**
- **Single engine with generator $235.00** **Twin engine with generator $415.00**
- **Fresh water system $91.00**

Prices do not include tax, cost of fuel treatment, fogging oil or mold prevention packs

Monthly Winter Maintenance Program

You can use your boat throughout the winter. The boat is winterized and tagged but left ready to run. Anytime you use the boat during the program period just drop off the winterization tag in our mailbox or ship store. We will re-drain the boat and replace the tag. We automatically start the boat, check the systems, and re-drain once a month. Anything unusual or needing attention is reported to you.
LABOR prices are as follows: PER MONTH, Nov thru Feb

- **Single engine $139.00** **Twin engine $249.00**
- **Single engine with generator $175.00** **Twin engine with generator $285.00**
- **Fresh water system $40.00**

Prices do not include tax, cost of fuel treatment, fogging oil or mold prevention packs

We can also winterize your personal water craft for only $115.00
